

## MARINE SUPPORT FOR BRIDGE CORE SAMPLING SURVEYS

### ► Scope of work

Client: GHD

October 2022

North Marine was contracted by GHD to provide marine support on their 'bridge core-sampling project' in Innisfail, Queensland.

As subcontractor to GHD on a Department of Transport and Main Roads tender, North Marine provided crew and multiple workboats to transport GHD staff, core-sampling personnel, a drilling rig, a generator and bulk equipment. Core sampling operations were conducted on the Johnson River bridge support piers. Work was tidal dependent, with a total of 10 different concrete core samples taken at differing tidal variations. Maintaining vessel stability was crucial. NM charter vessels 'Reef Safari' and 'Tin Duck' were utilised.
