

CSIRO TOWED CAMERA SURVEY

► Scope of Work

Client: Commonwealth Scientific and Industrial Research Organisation (CSIRO) 2024

In August and November/December 2024, North Marine supported CSIRO in conducting a Towed Camera Survey along the Great Barrier Reef between Cairns and Brisbane using the vessel Sea Horse.

The operation involved deploying the 900kg deep towed camera system capable of capturing high-resolution imagery and video of the seafloor. North Marine provided expert vessel handling and logistical support, ensuring safe and efficient deployment of both the deep towed and drop camera systems in optimal conditions.

► Discriminators

- Extensive experience in marine operations
- Strong biosecurity and environmental compliance
- Adept at performing logistically complex projects
- Fleet of suitable charter vessels to perform works
- Proven collaboration with CSIRO
- Experienced management & personnel
- Detailed safety and performance reporting

► Outcome

The CSIRO Towed Camera Survey successfully captured valuable seafloor imagery and species data along the Great Barrier Reef. North Marine's expert support ensured smooth deployment and retrieval of the camera systems.
