

BLOOMFIELD RIVER MARINE STRUCTURES PROJECT

Scope of work

Client: Marine Structures

2025

In August 2025, North Marine was engaged by Marine Structures to support cargo transport, pile removal, and pontoon installation at Bloomfield River, Far North Queensland.

The project involved transporting 69 tonnes of cargo from North Wharf in Cairns to Bloomfield River on the dumb barge WBIV, towed by Pacific Ranger. WBIV remained onsite for three weeks to support operations. North Marine also provided specialised dive support for the removal of two partially submerged piles within Bloomfield River, carried out by an ADAS-certified dive team operating from Sea Horse within a croc cage, with the landing craft Reef Safari assisting in shallow-water access and equipment transport.

Explore our website to discover a diverse portfolio of our projects.

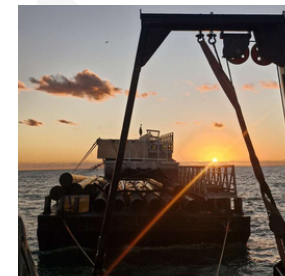

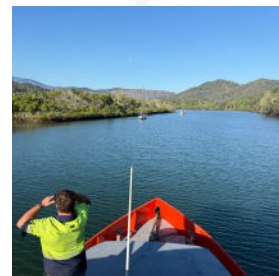

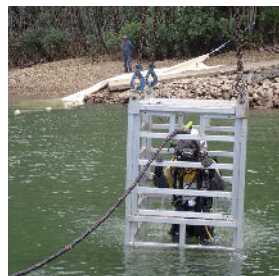

Discriminators

- Mobilised 78+ tonnes of cargo into a restricted tidal river system
- Flexible logistics adapted to tidal windows
- Integrated fleet: Pacific Ranger, WBIV, Reef Safari, Sea Horse
- ADAS-certified dive team experienced in high-risk environments with croc cage operations
- Cost-effective load-outs combining pontoon and project cargo

Outcome

North Marine safely delivered all cargo, including piles, pontoon, and gangways, into Bloomfield River and supported on-site construction. Two submerged piles were removed by divers under strict safety protocols. The project was completed on schedule with full logistical, dive, and fleet support provided.
