

SALVAGE OF 'ANGELA B' & 'INA' TULLY HEADS, QUEENSLAND

Scope of Work

Client: Maritime Safety Queensland (MSQ)

2026

In May 2026, North Marine completed the salvage and disposal of the derelict vessels Angela B and Ina from a remote coastal location at Gin's Camp Beach in Far North Queensland. The project involved vessel recovery, demolition, waste removal and site rehabilitation in an environmentally sensitive area with challenging access and tidal constraints.

North Marine mobilised a combination of marine assets, heavy equipment and experienced salvage personnel to safely remove both vessels. All recovered materials were transported for lawful disposal, with works completed in accordance with MSQ requirements and environmental management controls.

Explore our website to discover a diverse portfolio of our projects.

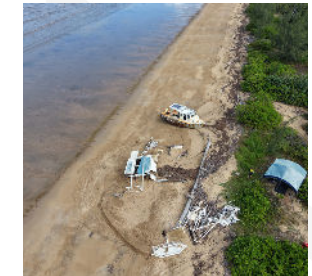

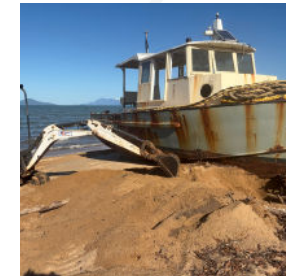

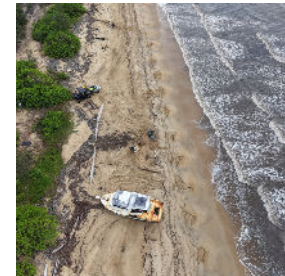

Discriminators

- Remote coastal salvage capability
- Experience operating in environmentally sensitive locations
- Purpose-built salvage vessels and equipment
- Integrated marine and land-based recovery operations
- Strong environmental and pollution prevention controls
- Experienced salvage and project management team
- Proven delivery of Maritime Safety Queensland projects

Outcome

Both vessels were successfully removed and disposed of in accordance with MSQ requirements. The project was completed safely, with no environmental incidents recorded and the site was left clear of debris and hazards.
